US!

Personalized Learning is a learner driven approach to instruction that empowers students to take ownership of their learning.

This network is for Administrators, teachers, counselors who are connected to the work of innovative practices in their school or community.

Schools already involved in the EXPLORE, LAUNCH and TRANSFORM pathways can join to continue their learning and design process from those pathways.

The Personalized Learning Network of NEO connects and supports educators committed to preparing each child for future success through personalized learning and innovative approaches to learning. The network will meet on a quarterly basis for schools to collaborate, share ideas, resources, discuss current work and stay current on policies and practices as it is connected to personalized learning and innovation. Schools doing this work from all over Ohio and the nation will be spotlighted to better understand how they implemented new innovative practices, strategies, and approaches that are learner centered. This work also supports the Ohio STEM practices, Portrait of a Graduate implementation strategies, as well as authentic learning partnerships and connections.

Our network will focus on the components of the Ohio framework which are learner driven approaches, authentic learning, flexible learning environments, optimal path and pace, and evidence of learning and feedback.

Advanced registration is requested.
